Education

Degree	Institute/Board	CGPA/Percentage	Year
B.S. (Physics)	Indian Insitute of technology, Jodhpur	6.02	2023-Present
Senior Secondary	UPMSP	76.4%	2022
Secondary	UPMSP	82.4%	2020

Research & Technical Projects

1. Sentiment Analysis Jan–May 2025
(Python, Flask, scikit-learn, NLTK, TF-IDF) *At IIT Jodhpur*

- Developed a Flask-based web application for real-time sentiment analysis, classifying text into positive, negative, or neutral categories with 80% accuracy using SVM.
- Designed an NLP pipeline with tokenization, stopword removal, lemmatization, and TF-IDF vectorization, processing 1,000+ text inputs.
- Evaluated multiple ML models (Logistic Regression, Naïve Bayes, SVM), optimizing performance by 10% through hyperparameter tuning.
- SVM gave the best performance with 80% accuracy on the test dataset.
- Deployed the optimized model into a Flask web application for real-time sentiment predictions through an interactive user interface.

2. Fruits And Vegetable Image Classification Jan-Feb 2025
(TensorFlow, Scikit-learn, Voting Classifier, SGD Optimizer, ResNet50, Data Augmentation) *Self*

- Explored various machine learning approaches, starting with traditional models like KNN, Random Forest, and Logistic Regression, achieving about 97% accuracy with an ensemble voting classifier.
- Implemented ANN/MLP with SGD Optimizer and sparse categorical cross-entropy loss, resulting in approximately 96% accuracy on the training and validation datasets.
- Applied CNN with data augmentation techniques (rescaling, flipping, shearing, rotations, zooms, shifts) to mitigate overfitting, achieving around 98% accuracy.

3. Stroke Prediction Using Machine Learning Nov, 2024
(Python, Pandas, scikit-learn, TensorFlow) *ML-Course Project*

- Built ML models on clinical and demographic datasets to predict stroke risk.
- Deployed a web interface for interactive prediction and evaluation.

4. Optimization of Silicon Heterojunction Solar Cells Jan2026
(Research Project) *Ongoing - At IIT Jodhpur*

- Working on Optimization of Efficiency in Third-Generation Hybrid Photovoltaic Solar Cells Using Multilayer Heterostructures.

Key Coursework

Introduction to computer science, **Machine Learning**, Big Data Management, **Data Structures and Algorithms**, Embedded Systems and IoT, Basic and Applied Computational Labs, Electronics, communication system, **Quantum Computing.**

Technical Skills

Programming: C, C++, Python, MySQL
Machine Learning / Data: NumPy, Pandas, scikit-learn, TensorFlow, Keras, Qiskit
Tools: Git, GitHub, VS Code, Jupyter Notebook, Google Colab
Web: HTML, CSS , Js
Operating Systems: GNU/Linux, Windows

Achievements

Joint Entrance Examination(JEE) Advanced: Ranked in top 1% among 1.1 million aspirants. July, 2023
